

ALI ABU WAKED

Full Stack Laravel Developer | Vue.js | REST APIs | AI Integration

Palestine • +972 56 792 4995 • [✉ Email](#) • [↗ GitHub](#) • [↗ LinkedIn](#) • [↗ Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Laravel Developer focused on building production-grade, scalable web applications with Laravel, Vue.js 3, and MySQL. Experienced in architecting secure REST APIs, role-based access systems, and multilingual platforms, with hands-on work integrating AI/LLM capabilities into real product features.

Grounded in Clean Architecture, SOLID principles, and the Repository/Service pattern — comfortable owning a feature end-to-end, from database design and backend services to responsive, state-managed Vue interfaces, with a consistent focus on security, performance, and maintainability.

TECHNICAL SKILLS

Languages	PHP • JavaScript • TypeScript • HTML5 • CSS3
Backend	Laravel • MVC • RESTful API Design • Queues • Broadcasting • Notifications
Frontend	Vue.js 3 • Pinia • Vue Router • Tailwind CSS • Axios • Vite
Databases	MySQL • Relational Database Design • Query Optimization
Architecture	Clean Architecture • SOLID • Repository Pattern • Service Pattern • UUID-based Design
Authentication & Security	Sanctum • Authentication • Authorization • RBAC • IDOR Prevention
AI Integration	LLM Integration • Groq API • Prompt Engineering
Cloud, DevOps & Tools	Docker • Linux • Git • GitHub • Composer • NPM • Postman

FEATURED PROJECTS

HES Connect *Healthcare Ecosystem Platform*

A multi-tenant healthcare platform connecting patients, doctors, pharmacies, healthcare facilities, and organizations through a unified digital ecosystem with role-based dashboards and reporting.

- Architected the backend on Laravel using UUID-based routing, a layered Service/Repository structure, and Spatie Permissions for granular RBAC across patients, doctors, and facility staff.
- Designed a multilingual data layer (Arabic/English) with Spatie Translatable, standardizing all API responses through a shared ApiResponse trait.
- Built appointment management with facility/doctor scheduling, overlap-prevention logic, and real-time notifications.
- Delivered an AI Healthcare Assistant for medical recommendations, a Vue 3 + Pinia analytics dashboard, and IDOR-hardened endpoints via ownership-scoped, policy-based authorization.

Tech Stack: Laravel • Vue.js 3 • PHP • MySQL • REST APIs • Sanctum • Pinia • Axios • Tailwind CSS • AI Integration

Organick *E-Commerce & Logistics Platform*

A production-ready commerce platform with dedicated Admin, Supervisor, and Driver dashboards, covering the full order lifecycle from checkout to delivery.

- Built three role-specific dashboards, each with distinct permissions and workflows tailored to admins, supervisors, and delivery drivers.
- Implemented end-to-end order management with real-time tracking, inventory control, and operational reporting and analytics.
- Integrated Stripe and PayPal alongside Cash on Delivery, with secure, validated transaction handling.
- Delivered a responsive, modern UI backed by RESTful APIs with authenticated, role-based access across all dashboards.

Tech Stack: Laravel • Vue.js • MySQL • REST APIs • Stripe API • PayPal API • Authentication • Authorization

AI Task Planner *AI-Powered Software Planning System*

An AI-assisted planning tool that converts high-level product goals into structured, sprint-ready engineering backlogs.

- Integrated the Groq LLM API to auto-generate agile backlogs, epics, and tasks from natural-language project descriptions.
- Applied prompt engineering to improve the structure, consistency, and relevance of AI-generated task breakdowns.
- Designed a task organization system supporting sprint planning and iterative delivery.

Tech Stack: PHP • LLM Integration • Groq API • Prompt Engineering • Software Planning

KEY ACHIEVEMENTS

- Designed scalable backend architectures supporting complex, multi-role workflows.
- Built secure REST APIs with robust authentication and authorization layers.
- Integrated AI/LLM capabilities into production-ready web applications.
- Designed multilingual systems (Arabic/English) with maintainable, translatable data layers.
- Implemented secure payment gateway integrations (Stripe, PayPal) and optimized database design and query performance across relational schemas.

EDUCATION

B.Sc. in Computer Systems Engineering — Al-Azhar University, Gaza

Faculty of Engineering & Information Technology • GPA: 88%

Languages: Arabic — Native • English — Professional Working Proficiency
